KAIGA PROJECT

DO No. Kaiga-1&2/CPE/00120/90/S/287 August 13, 1990

Dear Mr. DePalma,

I received your paper on "On the possibility of Extraction of Electrical Energy Directly from Space" dated 29th April 1990 quite some time ago.

I was very satisfied to see that you have appropriately placed the

discovery of N-Effect, N-Machine and Space Power Generator and given in brief the historical background starting from Faraday disc in 1831. The paper makes an interesting reading and I am sure it will be a historical document.

The main reason for me to have not acknowledged the receipt of your valuable paper was my total pre-occupation in addition to the project's responsibility, with the development of a very new system

of space power generation in which the magnetic circuit has been divided into two parts - one part stationary and the other rotating.

I was keen that I should write to you on the findings of the result with this latest machine and as you know very well it has taken couple of months to develop this system. The tests are yet to be completed.

However, it has been now observed through experiments that the present Space Power Generator which has 1/3 of the weight of the previous one described in my paper "Detection of Stationary and Dynamic Space Substratum", has the ratings of similar generated voltage and power while its efficiency can go higher than the previous machine.

I expect to get the efficiency of this machine in the range of 500% to 600%. The reduction in the weight of the machine has become possible due to the segregation in the magnetic circuit. Only that part is kept in rotation on which the electro-magnet is mounted.

I expect that total tests on this machine should be completed within 4 - 6 weeks and after that I will send you all the details.

It has now become very evident that generation of electrical power can be achieved through a commercially viable system, which may take about 5 KW of total power for rotation and yet generate about 30 KW of net electrical putput.

I was very glad to learn from Dr. Tom Brown that you would be reading my paper in the International Conference organised by Borderland Sciences Research Foundation. I am sure the delebrations in the conference would have been excellent.

With best wishes,

Yours sincerely,
(P. Tewari)

Mr. Bruce DePalma,
U.S.A.

Regd. Office: 424-425, World Trade Centre, Barakhamba Lane, Connaught Place New Delhi-110 001.

Vangard Note...

I (Jerry Decker) had the good fortune to attend the Borderland Sciences 1st Congress. It was a good conference with many interesting speakers. Bruce DePalma read Tewari's paper and showed his N-Machine which uses mercury as a contact point. The unit is enclosed in a plastic housing to prevent fine mercury particles from being ejected into the open air.

DePalma also showed one of his original suspended gyroscopes which showed a distinct variation in the weight and movement of a spinning mass long before the Japanese experiment which gained so much publicity.

Bruce told of one of his experiments which used grass as a gravity detector. He built a mount above a rotating phonograph turntable which held a pie pan with earth and grass seed.

When the turntable spun, it caused the grass to grow higher.

A large weight was added to the turntable, the grass grew even higher as if the gravity in the area were somehow reduced.

Another experiment using a similar technique was to mount the pie pan holding the earth and grass seed directly onto the spinning turntable.

As the turntable spun, the grass grew higher than normal and slightly in TOWARDS the axial shaft of the turntable, this EVEN THOUGH THE PAN AND THE TURNTABLE WERE NOT PHYSICALLY CONNECTED.

When a weighted mass was added to the spinning turntable and pie pan, the grass grew at a definitely increased angle towards the axial shaft of the spinning mass.

Another phenomenon he mentioned was the slowing down of a clock when in the presence of such a field.

KEELY RESEARCHERS TAKE NOTE OF THIS PHENOMENON!!

Remember that Keely stated that TIME IS GRAVITY!

If you have comments or other information relating to such topics as this paper covers, please upload to KeelyNet or send to the Vangard Sciences address as listed on the first page.

Thank you for your consideration, interest and support.
